Bonus Questions 01
They should use UNION. It is used to combine table and will not return duplicates in the result.

02
They should use UNION ALL, it is used to return ~~the~~ the tables as they are, duplicates included

03 1
The query fails because there is an extra column ~~it~~ in the second SELECT statement.
When using UNION both SELECT statement should have the exact ~~return~~ same column, in the same order.
